Overview

The Partnered Evidence-Based Policy Resource Center (PEPReC) is an HSR&D/QUERI resource center designed to provide timely, rigorous data analysis to support the development of high-priority policy, planning, and management initiatives and quantitative program evaluations with strong potential to improve the quality and efficiency of VA healthcare. VA has undergone new policy and practice transformations, notably with the passage of the Veterans Access, Choice, and Accountability Act of 2014 (Choice Act). VA policymakers and managers are tasked with improving access to and quality of VA care while simultaneously financing Veterans' choices of non-VA care at a time when demands on the VA budget are growing rapidly. Consequently, there is an urgent need for evidence-based policy, planning, and management to:

- Accurately forecast the demand for VA care;
- Efficiently deploy resources where they are most needed;
- Monitor performance, including access to care; and
- Make sound decisions about major new investments.

The PEPReC’s core mission includes refining VA measurements of access to care, productivity, demand, and capacity, as well as investigating relationships among them to improve policy and planning. Of particular interest are the relationships between capacity/demand and productivity/access. PEPReC will also help monitor and evaluate impacts of major investments, such as new versions of VistA. In response to requests, PEPReC assists operations partners with program evaluation design, data capture, verification, and analysis. PEPReC also analyzes large administrative databases primarily from VA, Medicare, and Medicaid. In consultation with VA’s Office of Policy and Planning, PEPReC uses statistical and econometric models to forecast supply and demand responses to policy initiatives and changes in healthcare and labor market conditions. Studies are prioritized by their anticipated impact on VA policy and healthcare system needs, as well as the availability of resources from the operations partner to support the proposed study.

The PEPReC has three major objectives:

- Use data-driven economic and statistical models to forecast VA demand, capacity, and productivity to support budgeting, investment, and purchasing decisions.
- Develop, validate, monitor, and refine performance metrics to optimize access to and quality of care.
- Design and support randomized and quasi-random program evaluation objectives.

PEPReC and the Learning Healthcare System

The overarching goal of PEPReC is to be an engine for VA’s learning healthcare system, in which it resides (see Figure). In the learning healthcare system, research informs practice (e.g., establishing the evidence base for guidelines, monitoring, and incentives) and practice informs research (e.g., providing performance measurement, operational data, as well as policy direction). PEPReC will participate in this process by:

- Designing metrics and incentives, informed by existing research;
- Collaborating with operations to implement those metrics and incentives;
- Evaluating results with randomized, quasi-experimental, or strong observational designs; and
- Suggesting and making refinements, reflecting results and operational constraints and objectives.

Principal Investigator
Austin Frakt, PhD
Austin.Frakt@va.gov

Advisory Committee
In addition to the Director of HSR&D, the PEPReC Advisory Committee includes representatives from VA’s Office of Policy and Planning, VHA Clinical Operations, Office of Mental Health Operations, and Office of Informatics and Analytics.
