

Characterization, Evaluation, and Implementation of Innovative TBI Intensive Evaluation and Treatment Program (IETP)

The TBI Intensive Evaluation and Treatment Program (IETP) is an innovative approach for delivering evidence-based care in a residential, inpatient format to address care needs in a compressed, timely manner ideally suited for abbreviated inpatient treatment stays for Active-Duty Service Members with TBI.

The primary goal of this Partnered Evaluation Initiative is to inform development of a strategic approach to implement IETP throughout 5 polytrauma treatment programs established at PM&R Centers of Excellence (CoE).

Successful implementation will **result in patient empowerment and treatment engagement** through comprehensive rehabilitation services for Veterans or service members with TBI, **guided by effective strategies** selected to improve clinical care efficiency at each participating CoE.

Leveraging Evidence-Based Strategies

Implementation strategy opportunities

Characterize programs, staff, Active-Duty Service Members through interviews, site visits, observations, surveys

Collect and evaluate patient outcome measures through surveys and identify IETP services received through chart abstraction

Apply findings and incorporate into development of national PM&R dissemination materials for successful implementation

Activity Progress and Anticipated
